

Heading, Header and Footer Tags

HTML headings

HTML headings are titles or subtitles that we want to display on a webpage.

HTML headings are defined with the <h1> to <h6> tags.

<h1> defines the most important heading. <h6> defines the least important heading.

The following example shows how to add Headings to a web page.

HTML Headers

The <header> element acts as a container for introductory content or a set of navigational links.

A <header> element typically contains,

- one or more heading elements (<h1> - <h6>)
- logo or icon
- authorship information

We can add a Header to our web page using the <header> element as shown below in the following example.

HTML Footers

The <footer> element defines a footer for a document or section.

A <footer> element typically contains:

- authorship information
- copyright information
- contact information
- sitemap
- back to top links
- related documents

We can add a Footer to our website using the <footer> element as shown below.
